

SeniorLife.AI – Extending the **Quality of Life** of Older Adults

PRODUCT FDA registered software measures risk of fall, dementia & improves rehabilitation outcomes

SeniorLife.AI app makes use of **vision based AI** to identify potential problems with mobility, dementia and behavioral health in older adults. The software is also used to assess **progress of recovery** after surgery. It is **HIPAA** compliant, registered as a Class II FDA **software-as-a-medical device** and integrated to **EHRs**. The Company's software can be **white-labeled**, customized and **embedded inside a third-party app**.

CUSTOMERS Market leader in Japan & expanding in the US

Large **rehabilitation** facilities, **physiotherapy** centers and **senior living** communities use SeniorLife.AI. The software was endorsed by [prominent academics](#) as well as [leaders in rehabilitation therapy](#). In addition, several large enterprises are using the company's AI models to **develop their own products** for preventing injury to seniors, improving food choices, making senior living more safe as well as providing therapy to adults with MCI (mild cognitive impairment). SeniorLife.AI **shares revenue** with these partners.

COMPANY Founded by serial entrepreneur & healthcare executive

SeniorLife.AI is headquartered in Bellevue, WA with a significant operation in Japan as well as an engineering team in India. It was founded by [Ash Roy](#) (Indian Inst of Tech, Wharton) and [Kaz Ogawa](#) (Kyoto, Stanford).

TECHNOLOGY Proprietary AI models & large labeled video data

The Company continues to acquire **labeled video data of older adults** with customers & partners – expected to be **100K+** by the end of 2024. SeniorLife.AI uses these data to train its clinical-approach based AI models that helps make **diagnosis/therapy more precise**.
